TEACH WONDER

Announcing the Wonder Workshop - ACTEM
Teach Wonder Initiative

We at Wonder Workshop are committed to accelerating the adoption of computer science principles in 21st-century classrooms. That's why we're proud to introduce Teach Wonder, our brand-new online professional learning program!

We designed and developed our first 12-hour online courses to support teachers as they integrate coding and robotics skills into everyday teaching and learning.

- First in a series of online courses to come -

Introduction to Coding and Robotics with Dash & Dot

Contains: six two-hour modules for teachers to complete at their own pace.

1 The Evolution of EdTech

2 Personalizing Pedagogy

3 Pathways to Computer Science

4 Making Room for the 4Cs

5 Transforming Daily Instruction

6 Robot Basics 101

Educators can dive into theory and practice new concepts with creative and reflective learning activities, all while connecting with a larger community of like-minded educators from across the country.

"Coding is becoming a critical new literacy for our students. The Teach Wonder Initiative will offer Maine teachers the training along with a fun device to bring coding to life for our elementary & middle school students. "

Gary Lanoie, Executive Director, ACTEM

Wonder Workshop is partnering with **ACTEM** to offer the online course plus a Dash robot at the discounted cost of **$125** [a $450 value].
